Apprenticeship as a cutting machine operator (m/f/d)

Description

Milling specialization

Machining mechanics manufacture precision components from metals/plastics, such as 3D mold contours, using exciting processes such as milling. Your tasks will include setting up automated milling machines and writing or modifying CNC machine programs.

You will also monitor the work process and check whether the dimensions and surface quality of the finished workpieces meet the specifications.

Responsibilities

- Operational and technical communication
- Differentiation / allocation of materials and auxiliary materials
- Manufacture of workpieces, components and assemblies
- Maintenance of machines
- Control technology
- Planning the production process
- Programming and setting up machine tools or production systems
- Monitoring and optimizing production processes

Job Benefits

- Industrial foreman specializing in metal
- Technical specialist
- Technical business economist (IHK)
